In Odoo, you can create and view various types of graphs to analyze data.

1. **Graphics and Reporting Module:**

   - In Odoo, charts and reporting are available as part of its standard application suite.
   - You can access the chart functionality from different modules, such as Sales, Purchasing, Inventory, Accounting, etc.

2. **Creation of Graphical Reports:**

   - To create a new graphical report, go to the corresponding application (for example, Sales for sales-related reports).
   - Within the application, look for the "Reports" or "Graphic Reports" option in the menu.
   - There, you will usually find an option to create a new report or customize an existing one.

3. **Chart Type Selection:**

   - Once you are in the report editor, you will be able to choose the type of chart you want to create, such as bar charts, pie charts, line charts, etc.
   - You can also select the data you want to display in the graph, such as revenue per period, sales quantity per product, inventory status, etc.

4. **Chart Customization:**

   - Odoo allows you to customize your graphics according to your needs.
   - You can adjust the X and Y axes, add legends, titles and labels, change colors and styles, among other customization options.

5. **Graph Display:**

   - Once you have set up and saved your graph report, you can access it from the reports section of the corresponding application.
   - Charts will be available for viewing and analysis, allowing you to make informed decisions about your business.

6. **Custom Dashboard:**

   - In addition to individual reports, you can create custom dashboards containing various important charts and metrics.
   - These dashboards can be displayed on the Odoo home page so you can quickly see the current status of your business.
